# The digital classroom

## **Implementing new media education in practice**

Comprehensive package including convenient classroom management, efficient network management, and school-wide message transmission

The topic of digital classrooms is on everyone's lips, not least since the Federal Government's promised digital pact. In practice, however, schools often appear to be stuck in the Ice Age, as implementing the digital classroom is a seemingly mammoth project, especially in tandem with the numerous areas in which teachers are already active. Firstly, school computers need to be kept up-to-date, and in the least time-consuming way possible. And secondly, teachers and students need to be able to use new media intuitively in their classrooms, without losing track of where they are. Can these major challenges really be implemented in practice?

## The Digital Classroom from MASTERSOLUTION

The Digital Classroom from Mastersolution AG offers intuitive classroom management, efficient network management, and messaging transmission throughout the school.

More than 12,000 schools are already working with the Digital Classroom from Mastersolution AG, including vocational schools in Styria, the Heinrich Heine School in Hagen, the State Grammar School in Neuhaus, and schools in the Wetterau district.

### Security

with a solution you control yourself

### Flexibility

with the option of integrating further service providers

### Individual customisation

with components that adapt to your requirements

Monitoring Internet control  
Surveys LAN messenger  
homework collection screen transfer  
IT asset management Inventory  
printer management remote access  
testing and reporting Messaging  
Classroom management

## MASTERSOLUTION Digital Classroom

Comprehensive package including convenient classroom management, efficient network management and school-wide messaging

### Don't get lost using new media

The world of school is getting multimedia - whether on PC or tablet. With the Digital Classroom by Mastersolution AG, teachers are able to provide required attention and can offer support, when the entire class is working with PC or tablet simultaneously. All PCs/tablets of the class are displayed as thumbnails at a glance. For example, with one click all PCs/tablets can be blocked immediately. Teachers are not only able to transfer screen contents to all PCs/tablets explaining tasks and solutions to their students, but also enable websites targeted in order that the internet is used by them. Teachers can create surveys easily testing the student's performance level from time to time. With a few clicks and an automatic evaluation, exams and tests can be created and thus also performed on the PC safely and sustainably.

### Emergency message transmission to all PCs and tablets on the school's LAN

MASTERSOLUTION's Digital Classroom allows you to send important messages quickly, accurately and without the need for WiFi. In the event of a fire, attack against the school, laboratory accident, etc, everyone in the school must be informed immediately, including those in the outbuildings. Emergency messages can be defined and/or preset via a key combination and sent to all user groups or selected sub-sets. Messages containing other information, such as last-minute change of room number for the next teacher conference, etc., can be quickly sent to teaching staff and answered with a confirmation.
