**LMS & VMS**

Implementation at DATEV eG

Education 4.0 DATEV implements an online platform for students with MASTERSOLUTION

## Lern Management System [LMS] – individual learning platform, user management, performance assessment

### Company profile

DATEV eG is a complete service provider for the tax and economic consulting sector. The range of services includes not only software and IT services, but also consulting and further training courses for the areas of accounting, human resources management, business consulting, tax, office organisation and merchandise management systems. The online platform for students is free. At DATEV, data protection is a top priority and the data will not be passed on to third parties.

### Why MASTERSOLUTION LMS & VMS?

With the central online platform "DATEV students online" at [www.datev.de/students](http://www.datev.de/students), DATEV makes all DATEV offers centrally available for students aspiring to become tax consultants (and related occupations) with a university login. The Learning Management System MASTERSOLUTION [LMS] is put to use here, which is an open source LMS for the implementation of an in-house learning platform. With the help of the Video Management System [VMS], a secure video cloud can be used in Germany, thereby ensuring reliable content protection. DATEV eG can decide with a mouse click whether content is available for free download for example or is provided with copy protection.

### Areas of application & added value

Robert Helbig, product management „DATEV students online“ "With the platform, we can offer students a central online platform on which all DATEV offers are centrally grouped together and are directly available via the university login. An additional login is not necessary due to verification via the German Research Network. The DATEV platform offers in addition to software access to 100 full versions including sample data (without installation and completely maintenance free thanks to the cloud technology), also E-learning including proof of performance, a research database, specialist literature, a certification program as well as a community."

### Contact person

### About the project:

DATEV cooperates with the German Research Network. This allows full access to all DATEV solutions without an extra account (e.g. via Shibboleth login). Students can simply use their existing university login as normal.
